REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

There is no teaching or suggestion in the prior art of the claim limitations, among other things, as presented in the independent claims 43 and 48 specifically wherein the master router data stored by each routing device indicates whether the respective routing device is a master router or a slave router with respect to each network to which the respective routing device is connected, wherein with respect to each network, one of the routing devices connected thereto, that is also connected to a network nearer to a parent router, which assigns the network identification data to identify the networks, is the master router and with respect to each network, one or more of the routing devices connected thereto that is not connected to the network nearer to the parent router, is the slave router, whereas the network identification data of each respective routing device identifies a network to which the respective routing device is connected, also, determining, from the acquired master router data, a number of detected master routers connected to the networks to which the first routing device is connected; and disabling a router function of the first routing device when, in relation to the networks to which the first routing device is connected the determined number of detected master routers is zero or two or more, such that a loop path is prevented from forming between the first routing device and the plurality of routing devices, wherein the routing function of the first routing device allows the first routing device to connect to a network, such that when the router function is disabled, the first routing device cannot connect to the network.

2. The closest prior art found by the Examiner is the previously cited references namely, Ando et al. Pub. No. (EP 1039725 A2); Rangaraian et al. Patent No. (US 7,126,944 B2); Maciel et al. Patent No. (US 6,112,248); Kanekar et al. Patent No. (US 6,751,191 B1); Fukushima et al. Patent No. (US 6,049,524 A1); Beatty et al. Patent No. (US 5,602,754) However, the references alone and in combination do not teach or suggest a routing device for connecting multiple physically discrete networks into a single system and startup method thereof the way as claimed in the present application

For these reasons, in conjunction with the other claim limitations puts this case in condition for allowance

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee; such submission should be clearly labeled "Comments on Statement of Reason for Allowance."
